Re: Enhanced 911 Status Report

Dear Messrs. Muleta and Solomon:

Verizon Wireless hereby submits its quarterly status report documenting the progress of its efforts to deploy Phase II Enhanced 911 ("E911") capabilities, as required by the Commission's *Order* granting Verizon Wireless a waiver from certain Phase II E911 obligations.¹ Should you need additional information, please contact the undersigned.

Sincerely,

A handwritten signature in black ink that reads "John T. Scott, III". The signature is written in a cursive, slightly stylized font.

John T. Scott, III

¹ *In the Matter of Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems*, Request for Waiver by Verizon Wireless, CC Docket No. 94-102, ("Order"), 16 FCC Rcd. 18634 (2001).

E911 Status - Quarterly Report
May 1, 2003

SUMMARY

Verizon Wireless has successfully implemented extensive network components, purchased modified handsets, and completed a complex series of tasks associated with providing enhanced 911 Phase I and Phase II location services to the public. Verizon Wireless' efforts to deploy enhanced 911 location services are summarized as follows:

- Verizon Wireless is presently able to support E911 Phase II service requests in markets supported by all three of its switch vendors.
 - Verizon Wireless met its milestones for completing deployment of the network-assisted portion of AGPS/AFLT in Lucent and Nortel markets by April 1, 2002 and August 1, 2002 respectively.
 - Verizon Wireless completed deployment of the network-assisted portion of AGPS/AFLT in its Motorola markets by March 1, 2003.
 - As of April 15, 2003, and since its last report, Verizon Wireless has deployed Phase I service to more than 100 additional PSAPs including deployments in FL, IL, KY, MN, MO, NC, OH, SD, TX and VA. Verizon Wireless now provides Phase I E911 service to a total of 1,831 PSAPs serving an estimated population of 125 million residents in 40 States.
 - Verizon Wireless has also deployed Phase II service to an additional 154 PSAPs since its last report. During the last quarter VZW activated Phase II service to PSAPs located in AL, FL, GA, IL, IN, KY, MN, MO, MS, NC, NY, SC and TX and now provides Phase II E911 service to 455 PSAPs serving an estimated population of 50 million residents in parts of 19 states.
 - Verizon Wireless has also deployed an interim EFLT solution in its Lucent and Nortel-switched markets which is activated commensurate with the activation of Phase II E911 AGPS/AFLT service to individual PSAPs.
- Verizon Wireless has ten GPS-capable models handset models it currently sells that are capable of transmitting location. Most of the handset models Verizon Wireless offers to customers are GPS-capable. Verizon Wireless has met the 25% handset deployment milestone established for the period that began July 31, 2002 and that ended March 30, 2003. 34% of the new handsets activated nationwide during that period were AGPS/AFLT handsets. (Verizon Wireless met its initial handset deployment milestone requiring it to begin selling and activating GPS-capable handsets by December 31, 2001.)

I. AGPS/AFLT NETWORK DEPLOYMENT

As Verizon Wireless indicated in its waiver petition, many parts of the wireless communication system – handset, cell site, switches, location PDE – must all interface to provide seamless voice and location data. The following summarizes, in brief, milestones completed by Verizon Wireless and its cell site, switch, and PDE infrastructure vendors. Verizon Wireless has noted that it regularly encounters deployment delays outside its control because: 1) the PSAP's CPE,² Computer Aided Dispatch ("CAD") or mapping equipment is not capable of displaying and/or utilizing the Phase II data stream, and/or 2) the PSAP's local exchange carrier has not upgraded its ALI database interface or is awaiting tariff approval. Verizon Wireless continues to work through any Phase II deployment issues and when necessary has reached mutual agreement with PSAPs to reschedule the deployment date.

- A. Lucent Network Components– Verizon Wireless previously met the April 1, 2002 deadline for implementing software upgrades to the portions of the network served by Lucent switches. Verizon Wireless completed the software loads in its switches and cell sites and the testing necessary to support the Assisted GPS solution and is presently able to support E911 Phase II service requests in its Lucent markets.
- B. Nortel Network Components – Verizon Wireless met the August 1, 2002 deadline for implementing software upgrades to the portions of the network served by Nortel switches. The software upgrades were completed in early July, approximately a month ahead of schedule.
- C. Motorola Network Components – Verizon Wireless met the March 1, 2003 deadline for implementing software upgrades to the portions of the network served by Motorola switches. Verizon Wireless completed the software loads in its switches and cell sites and the testing necessary to support the Assisted GPS solution and is presently able to support E911 Phase II service requests in its Motorola markets.
- D. EFLT Interim Solution – EFLT is provided through software changes to both switches and to the PDE.

² Some confusion arises because various parties generically use the term CPE to refer to different PSAP equipment. For purposes of this document, the term CPE refers only to a PSAP's E911 call taking equipment. Other ancillary equipment used by some PSAPs may be valuable to them but is not strictly required to take and respond to emergency calls. Items such as CAD and mapping equipment will be specifically referenced where necessary.

- Verizon Wireless successfully met the April 1, 2002 deadline for deploying an interim EFLT product in the Lucent-switched part of its network.³
- Verizon Wireless has deployed the EFLT feature in all Nortel markets by the end of November 2002.
- Motorola's EFLT product will not be available soon enough to serve as an interim solution, especially given that Verizon Wireless has now deployed the AGPS/AFLT solution in Motorola markets and compliant handsets are widely available. Motorola has advised that it would not be able to develop and release an EFLT product for testing until the end of 2004, with full deployment in early 2005.

II. HANDSET DEPLOYMENT

The *Order* required Verizon Wireless to begin selling and activating AGPS/AFLT capable handsets no later than December 31, 2001. Verizon Wireless met that requirement. The *Order* also established certain handset sales and activation milestones, requiring that at least 25% of all new handsets sold and activated between July 31, 2002 and March 30, 2003 were to be AGPS/AFLT capable. Verizon Wireless also met that requirement; 34% of its new handsets activated during that period were AGPS/AFLT capable. Actual handset sale data constitute trade secrets and are confidential and proprietary commercial information that Verizon Wireless does not make publicly available. Should the Commission believe submission of such data is necessary, Verizon Wireless is willing to provide them pursuant to a procedure for ensuring that the materials are not included in the public record of this proceeding.

Verizon Wireless currently has ten (10) GPS-capable handsets available to customers, Samsung models SCH-N300 and SCH-A310, Audiovox models CDM9155-GPX, CDM9500 and CDM8300, LG models LG VX2000 and LG VZ4400 and Motorola models T720, T720 Free-Up and V120E. VZW will continue to supplement its product line with additional GPS capable phones throughout 2003. Verizon Wireless is urging its vendors to meet its prescribed standards for products, which include the FCC's accuracy

³ In the waiver *Order*, the FCC stated that on or before April 1, 2002, Verizon Wireless must deploy the EFLT Phase II solution, with an accuracy on average of within 250 to 350 meters, without assistance of a modified handset, in all Lucent and Nortel switched markets. *Order*, 16 FCC Rcd. 18634 at ¶ 44 (2001). Verizon Wireless's petition for reconsideration requested modification of the EFLT condition of its waiver, because EFLT was an untested and unproven technology that should not have been converted into a binding requirement. The EFLT mandate is particularly unwarranted given the accuracy range required, which was unsupported by record evidence. Verizon Wireless sought reconsideration to eliminate the accuracy reference. In addition, Verizon Wireless filed a supplement to its petition on April 9, 2002, buttressing the request to remove the accuracy range with information regarding technical limitations, explaining how the interim EFLT solution will work to improve upon Phase I data in some cases, and supporting the need for a revised deadline of March 31, 2003, to implement EFLT in Nortel switched markets. The Petition and Supplement remain pending.

requirements. Vendors' ability to develop compliant handsets will determine ongoing availability of new handset models.

III. INTERIM NETWORK DEPLOYMENTS

Verizon Wireless was required to install interim, network-based technology in certain counties where it had received Phase II requests. By December 31, 2001, Verizon Wireless was required to provide Phase II capability to 100% of the area served by the requesting PSAPs in St. Clair County, IL and Lake County, IN. In addition, by April 1, 2002, Verizon Wireless was required to provide Phase II capability to 100% of the area served by the requesting PSAPs in Chicago, IL, Cook County, IL, St. Louis County, MO, and Harris County, TX.

Verizon Wireless successfully met the December 31, 2001 and April 1, 2002 deadlines but more than a year after completing its work, the St. Louis County, MO and Chicago, IL PSAPs have yet to acquire their LEC and CAD upgrades needed to activate E911 service, respectively.

- December 31, 2001: Verizon Wireless completed deployment of its interim network solution to provide Phase II service to 100% of the area served by the St. Clair County, Illinois and Lake County, Indiana (Gary-East Chicago) PSAPs. (Phase II service had been partially turned up in these two markets in October 2001.)
- April 1, 2002: Verizon Wireless completed deploying the network infrastructure in Chicago, Illinois, Cook County, Illinois, St. Louis County, Missouri (St. Louis) and Harris County, Texas (Houston). Phase II service was turned live in Cook County as of April 1, 2002. The Chicago and Harris County PSAPs asked Verizon Wireless to delay the live activation until further enhancements could be made in the network and to the PSAPs' equipment to provide capability for routing calls with Phase II data.
- The initial testing of Phase II routing enhancements was completed in Harris County on May 15, 2002. Thereafter, Verizon Wireless was able to complete its live deployment in Harris County on June 13, 2002. Verizon Wireless provided Phase II routing enhancements to previous live deployments in St. Clair County on June 13, 2002, Cook County on June 28, 2002, and Lake County on July 26, 2002.
- Verizon Wireless stands ready to complete the live deployment with Chicago, including the Phase II routing. However, the PSAP is awaiting upgrades from its CPE and/or CAD vendors that will allow the CPE to display and utilize the Phase II data. Upon resolution of these issues, provision of the service can be completed.

- With respect to St. Louis, the St. Louis County PSAP is still disputing selective router charges from Southwestern Bell Telephone Company. SWBT will not install facilities for Verizon Wireless until it receives confirmation that its charges for the selective router will be paid. To date, the St. Louis County PSAP has declined to pay such selective router charges. This problem has prevented Verizon Wireless from activating the Phase I and Phase II technology it deployed in St. Louis County over a year ago.

IV. PHASE I & II PSAP DEPLOYMENT STATUS CHARTS

As part of this status update regarding Verizon Wireless' Phase II compliance efforts, the FCC requested information regarding all pending Phase I and Phase II requests. The various attachments provide the status of the progress of Phase I and Phase II requests as of April 15, 2003. Deploying E911 services is a complex and multi-faceted process that requires cooperation and coordination between multiple parties.

- **Attachment A** provides a list of the 1,831 PSAPs who are presently receiving Phase I E911 Service from Verizon Wireless and demonstrates Verizon Wireless' continued commitment to providing E911 service. Verizon Wireless now provides Phase I E911 Service to PSAPs covering approximately 125 million residents in 40 states.
- **Attachment B** contains a list of the 131 requests for Phase I E911 Service that Verizon Wireless is presently working on, the status of deployment milestones documenting progress to date, comments on the deployment status, and anticipated in-service dates. In the in-progress Phase I deployment chart found as Attachment B, Verizon Wireless has attempted to distill its experiences regarding each request by: 1) identifying industry-accepted "deployment milestones" to advise the Commission as to the stages in the deployment process the parties have completed and what remains to be done; and 2) supplying comments that provide further information, albeit not exhaustive, regarding the types of issues that arise in the course of these deployments. Even where Verizon Wireless has completed its front-end milestones, there remain LEC and PSAP actions that must be completed before Phase I can go live. The comments cataloging the various issues beyond Verizon Wireless' control can be summarized as follows:

PSAPs: Despite having requested Phase I service, there are a variety of reasons why some PSAPs have not been able to work aggressively with Verizon Wireless or the vendors to complete deployment of the service. In these instances, Verizon Wireless tries to move forward to the degree possible. The chart demonstrates Verizon Wireless's effort to complete some milestones. Reasons cited in this report include:

- i. PSAP has not responded to multiple requests for information or approval of the deployment plan for an otherwise valid request.
- ii. PSAP is awaiting the provision of separate wireless trunks from the selective router to the PSAP.
- iii. PSAP uses a stand alone ALI database that requires additional time and effort to establish the data connection required to receive and use the location information. The ALI database must be capable of “steering” so that it can query the Mobile Positioning Center (“MPC”) for an NCAS solution, must contain ports, and must maintain a constant connection with the MPC. Many stand-alone ALI databases must undergo time- consuming upgrades to achieve these capabilities.
- iv. PSAP is awaiting a CPE or sometimes a CAD upgrade.
- v. PSAP refuses to accept the service without a contractual agreement (even though there is no cost-recovery reimbursement for carriers) or without an agreement to provide a customized solution for their particular equipment or configuration.

911 Service Provider (Local Exchange Carrier): In some cases, the LECs are declining to provision trunk orders until an interconnection agreement amendment is finalized to cover E911 services. As indicated above in Section III, disputes with LECs over the appropriate party to bill for various network charges has also delayed implementation. Another reason for delay is the need for LECs to complete infrastructure upgrades, usually involving the selective router, before provisioning E911.

State 911 Authority: A few state 911 authorities have asked Verizon Wireless to provide a “Proof of Concept” demonstration before they will authorize deployments in the state. This process can significantly forestall meeting the six-month deployment window, especially if the 911 authority is testing with multiple carriers on a sequential basis. Even if a demonstration is not required, some authorities must approve a carrier’s deployment plan before work can proceed, or have undertaken the responsibility to order trunks or otherwise manage the deployment process on behalf of the PSAPs within the state themselves.

- **Attachment C** provides a list of the 455 PSAPs in parts of 19 states who are presently receiving Phase II E911 Service from Verizon Wireless and demonstrates Verizon Wireless’ continued commitment to providing E911 service. Verizon Wireless estimates that about 50 million people live in these areas.
- **Attachment D** contains a list of 120 requests for Phase II E911 Service. Under the clarifications of the Commission’s rules release in its recent *Richardson*

*Reconsideration Order*⁴ VZW has mutually agreed to alternative implementation deadlines with PSAPs in many cases. Verizon Wireless, the PSAPs and the relevant local exchange carrier must complete certain milestone tasks before interoperability testing, the final step before a system goes live.

Attachment D also identifies the major stages or milestones in the deployment process that the parties must complete, details the milestone status, and provides further comments regarding the reasons for delay. Where possible, because of full LEC and PSAP participation, the deployment milestones can proceed expeditiously, with some tasks occurring in parallel. Where LEC and PSAP participation is an issue, Verizon Wireless has nevertheless initiated deployment, focusing on those milestones that it can accomplish alone. Specifically, once milestones 1 and 2 are complete (deploying Phase I service and making the network AGPS/AFLT capable), VZW proceeds with milestone 7 (establishing accurate cell site location information in the base station almanac). In future reports, completion of milestone 7 will be noted in the milestone status column even if the LEC and PSAP milestones 2-6 are not complete (as those require LEC and PSAP action).

Brief explanations of the various milestones from Attachment D are as follows:

- 1) **Deploy Phase I Service:** VZW and its vendors have worked with LECs and PSAPs to turn up Phase I service to most of the requests in VZW's Lucent and Nortel-switched markets. VZW continues to deploy Phase I capability to the remaining requests so that PSAPs will have one of the requirements needed to be able to accept and receive Phase II data.
- 2) **Load AGPS/AFLT Software:** Verizon Wireless tested and loaded software in its switches and cell sites, installed a pair of PDEs, and conducted FOAs of the system with PSAPs. Verizon Wireless completed these network upgrades in Lucent markets by April 1, 2002 and in Nortel markets by August 1, 2002 and in Motorola markets by March 1, 2003 as required by the *Waiver Order*. VZW has met this milestone for 100% of the Phase II requests in its markets. Having readied the network, Verizon Wireless stands prepared to complete other tasks required for individual deployments in 6-14 weeks, on average, depending on the number of cell sites.
- 3) **Upgrade LEC ALI Database Interface:** LECs establish the data protocol for interfacing with their ALI databases. Once the data protocol is established, the LECs may need to perform software upgrades, among other things, to provision the ALI database to pull the data (*i.e.*, steer an ALI query) from the MPC. VZW's vendors then work closely with the LECs to establish connectivity via the interface with the MPC.

⁴ *Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems*, CC Docket No. 94-102, Order on Reconsideration, rel. November 26, 2002 ("Richardson Order")

4) Modify ALI Data Format: The LEC and the PSAP must agree on the format for transmitting and displaying the Phase II data on the PSAP's CPE. Depending on the PSAP's preference, the LEC may need to build additional fields into the ALI data format to allow exact placement of the data parameters in the ALI record.

5) Modify PSAP CPE (and CAD, mapping equipment, if applicable) Screen Display for ALI format changes: Once the modified ALI data format has been agreed to by the LEC and PSAP, the PSAP and its CPE vendor must make any changes necessary to utilize the modified ALI data format. Similarly, if the PSAP wants to ensure that its ancillary equipment, *i.e.*, CAD and/or mapping equipment, is not adversely impacted by the modified ALI data format, it will need to consult its vendors and make whatever changes are necessary to that equipment to accommodate the ALI format.

6) Modify PSAP CPE for rebid (requery) capability: The PSAPs receive the Phase II data stream from the ALI database when their ANI/ALI Controller issues a request ("bid") to the ALI database. The initial bid is made upon receipt of an ESRD/ESRK or pseudo ANI -- which usually occurs before the PDE has completed the more precise Phase II location calculation. In the event Phase II data is requested before the data is received by the ALI database the system provides Phase I location data as a default. The PSAP equipment must therefore be able to rebid (requery) the ALI database for the Phase II location information.

7) Establish Accurate Cell Site Locations/ Base Station Almanac ("BSA"): VZW and its vendors must: collect data regarding exact coordinates for the location of its antennas; conduct an RF analysis to ensure adequate E911 coverage to the PSAP; perform a site survey to ensure the accuracy of location measurements obtained during data collection; calibrate the system by judging PDE calculations against ground truth; and populate the BSA with the collected data.

8) Interoperability Testing: First, the system must be tested for end-to-end interoperability before the system can go live. This step ensures that all components of the E911 Phase II network can communicate with each other.

In addition to the milestone status, the comments contained in Attachment D address:

LECs: Local Exchange Carriers must upgrade their ALI database interfaces to accept Phase II data from wireless carriers. Specifically, as provided in milestones 3 and 4, the LECs must upgrade their ALI databases and review and modify the ALI data format for sending Phase II data to the PSAPs, as necessary. The LEC Phase II ALI format must be provided to the PSAP to support the display and utilization of Phase II data. While some of the larger LECs announced their selection of one or more

interfaces and completion of the upgrades to their systems, the smaller LECs may not have announced their interface choice nor completed necessary upgrades. The LEC must also conduct interoperability testing verification with the MPC vendors. Verizon Wireless is concerned that LECs' deployment delays pending approval of tariff approvals for PSAP charges and/or amendments to interconnection agreements are impeding completion of Phase II service.

PSAPs: In some instances VZW is ready to complete work but is waiting on PSAPs and their CPE equipment (and CAD or mapping equipment, where applicable) vendors to modify their equipment to be able to utilize the Phase II Data and to provide rebid capability before final testing and live activation (see milestones 5, 6). In other instances, the PSAPs have requested a stop of the Phase II deployment for a myriad of reasons. Some of the reasons are: CAD or other equipment issues; pending resolution of PSAP/LEC contracts or tariffs; other PSAPs with whom they share a selective router must become ready for Phase II before necessary modifications to the shared SR can be made; the PSAP is migrating from HCAS to modified version of NCAS for Phase II and thus a connection between the LEC ALI database and VZW's MPC must be established; resource constraints; the PSAP wishes to install its own selective router. Again, these delays can impede completion of Phase II service.

DECLARATION OF RICHARD J. LYNCH

I have read the foregoing E911 Quarterly Status Report. I declare under penalty of perjury that the foregoing is true and correct. Executed on April 24, 2003.

A handwritten signature in black ink, appearing to read "Richard J. Lynch", written over a horizontal line.

Richard J. Lynch
Executive Vice President and
Chief Technical Officer
Verizon Wireless

Certificate of Service

I hereby certify that on this 30st day of April, 2003 copies of the foregoing E911 Quarterly Status Report in CC Docket 94-102 were sent by first-class mail to the following parties:

John Ramsey
Executive Director, APCO
351 N. Williamson Blvd.
Daytona Beach, FL 32114-1112

Robert M. Gurss

|----------------------------------------------------------------------------------------------------------------------------------------|--------|-------------------|--------------|-------------------------------|-----------------------------|----------|
| Milestones: 1-MSC Configuration 2-Cell Site Sector & RF Data 3-SS7 Gateway 4-MSC Integration 5-Traffic Plans 6-Voice Trunks | | | | | | |

Note: Front-End Milestones

- 1 - MCS Configuration** - Information provided by VZW on their MSC location, signalling, contacts, etc.
- 2 - Cell Site Sector & RF** - Defines the MSC and individual cell site sector footprint. Required to engineer and coordinate PSAP boundaries
- 3 - SS7 Gateway** - Required to Signal between the MSC and the Wireless 911 Service Provider SCP
- 4 - MSC Integration** - Tests the signalling between the MSC and the Wireless 911 Service Provider's SCP
- 5 - Traffic Plans** - Engineered by the Wireless 911 Service Provider to coordinate with the PSAP, load the MSAG to the ALI Database, and load to the databases associated with the SCP
- 6 - Voice Trunks** - MSC to S/R must be in-place to deploy WE9-1-1 Phase I service
